

## "I martedì della Ricerca"

## Gabriele Curci

Martedì 22 ottobre dalle 18:30 alle 19:30

Ju Boss 2.0, Via Castello 3, L'Aquila

Cosa sono "i martedì della Ricerca"?

Sono una serie di incontri che nascono dall'idea di creare un momento di contatto e condivisione tra le realtà del territorio che si occupano di ricerca.

## Titolo dell'incontro Observing and modelling the atmosphere: value and limitations for applications

Sunto: The atmosphere is the medium in the Earth System where we spend much of our lives and where most of the human activities are carried out. There is an increasing request for atmospheric information and forecast at different scales in time and space for the most disparate applications, from transport to urban planning, from tourism to civil protection, from recreational activities to health assessment, and so forth. In this presentation, I will summarize some of the key elements useful to understand the observational and modelling activities related to the atmosphere and the related products for applications from the meteorological to the climate scales, with particular reference to the activities carried out at the Centre of Excellence CETEMPS (http://cetemps.aquila.infn.it/) hosted by University of L'Aquila.
